Department of Genetics
University of Wisconsin
College of Agriculture
Madison 6, Wisconsin

Dear Dr. Lederberg:

I am sorry the manuscript on catalase work has been delayed, but Wyss promises the final rechecks will be finished in a day or so and will get it off to you. We hope this has not inconvenienced you.

Haas ran a few checks of your coli cultures and they gave the prototrophs in their appropriate combinations confirming your results. We have not done very much as we are learning the techniques to use in some tests. We will let you know how things go.

We would like very much your opinion on the validity of this work (good or bad) now that you have seen the additional data.

Yours sincerely,

Wilson S. Stone
